

# Maintenance and Reliability Assessment

## Assessment

Our approach includes doing a short assessment to identify the main deficiencies and prepare a plan for improvement. The main areas covered are:

- Maintenance Management Strategy
- Human Resources
- Routine Work Management Processes
- Parts and Materials Inventory
- Continuous Improvement Program

The outcome of the diagnostic is an Action Plan that is presented to the key stakeholders.

## Implementation

The client generally looks after the implementation of the Action Plan with periodic visits by one of our consultants

## Tools used include

Uptime maintenance assessment methodology, PROACT Root Cause Analysis (RCA), Reliability Centered Maintenance (RCM) and Total Productive Maintenance (TPM),
